

Using Cholesky decomposition on GPU

```
dmikushin@tesla-b:~/Programming/cholessky
File Edit View Terminal Help

[dmikushin@tesla-b cholessky]$ make
gcc -g -std=c99 cholessky.c -o cholessky -L../magma/lib -lmagma -lmagmablas -L../lapack -llapack -lblas -lm -lgfortran -L/opt/cuda/lib64 -lcublas -lstdc++
[dmikushin@tesla-b cholessky]$ ./cholessky 2048
Computing on CPU ... OK
Computing on GPU ... OK
Done! max diff = 0.000000
[dmikushin@tesla-b cholessky]$
```

Libraries with internal support of GPUs

- CUDA-kernels invocation is performed *inside* library calls, so user does not need to use CUDA explicitly
- Data transfer between host and GPU is also performed automatically sometimes

Libraries with GPU support

→ CUBLAS, CUFFT, CUSPARSE, CURAND

→ PLASMA, MAGMA

...

Cholesky example pipeline

- Generate a random matrix
- Produce a matrix with diagonal domination
- Perform Cholesky decomposition on CPU (lapack)
- Perform Cholesky decomposition on GPU (magma)
- Compare the results

Compile the libraries

Source code of required libraries is already hosted on server

LAPACK

Load the source code of lapack from repository into your folder

```
marcusmae@teslatron:~$ svn co
```

```
http://tesla.parallel.ru/svn/lapack
```

Compile the library

```
marcusmae@teslatron:~$ cd lapack/
```

```
marcusmae@teslatron:~/lapack$ make clean && make
```

Compile the libraries

Source code of required libraries is already hosted on server

MAGMA

Load the source code of lapack from repository into your folder

svn co <http://tesla.parallel.ru/svn/magma>

Compile (**-j2** – use two compile processes in parallel)

marcusmae@teslatron:~\$ cd magma/

marcusmae@teslatron:~/magma\$ make clean && make -j2

Compile the sample itself

```
marcusmae@teslatron:~$ cd cholessky/
```

```
marcusmae@teslatron:~/cholessky$ make clean && make
```

Results

the correct result (GPU version and CPU version do match)

marcusmae@teslatron:~/cholessky\$./cholessky 4096

Computing on CPU ... OK

Computing on GPU ... OK

Done! max diff = 0.000000

incorrect result (GPU version and CPU version are not matching)

marcusmae@teslatron:~/cholessky\$./cholessky 4096

Computing on CPU ... OK

Computing on GPU ... OK

Done! max diff = 4032.119629
